## Question No: 35 ( Marks: 3 )

Barley Ltd produces a certain food item in a manufacturing process. On 1st November there was no opening stock in process. During November, 700 units of material were put in to process, with a cost of Rs, 20,000. Direct labor cost in November was Rs.15; 000.production overhead is absorbed at the rate of 300\% of direct labor costs. Closing stock on 30th November consisted of 200 units which were $100 \%$ completed as to materials and $80 \%$ completed as to labor and over head.

Required: Calculate the quantity of units completed and transfer-out

## SOLUTION:

Units of opening work in process $=700$ units
Units put into the process= 200units
Units completed and transfer out $=700+200=900$ units

## Question No: 36 ( Marks: 5 )

The higher rate of labor turnover results in increased cost of production. Discuss the Effect of Labor Turnover

## Effect of Labor Turnover

## The higher rate of labor turnover results in increased cost of production:

(i) Increased cost of new recruitment, training,
(ii) Interruption of production,
(iii) Decrease in production due to inefficiency and inexperience of newly recruited workers,
(iv) The new workers are more accident prone and are liable to cause more damage to machinery, tools than old employees,
(v) Losses due to wastage, spoilage and defectives,
(vi) Increased number of accidents causing loss of output and increase in medical expenses and cost of repairs,
(vii) Lack of cooperation and coordination between old and new
employees resulting fall in output and increased cost of production,

Question No: 37 (Marks: 5 )

|  | Units |
| :--- | ---: |
| Units transferred to next department | 40,000 |
| Units still in process (all material, 2/3 labour \& FO H) | 8,000 |
| Abnormal loss (1/2 complete as to material, Labour and FOH) | 1,000 |

Following costs were added during the process.

| Materials | Rs.40,500 |
| :--- | ---: |
| Labour | 101,700 |
| Factory overhead | 50,500 |

## Required:

C
QUANTITY SCHEDULE:

| Unit received from departmet |  | 49000 |
| :--- | :--- | :--- |
| Unit completed and transfer to next | 40000 |  |
| Unit still in process(all material, 2/3 labour \& FO H) | 8000 |  |
| Abnormal loss (1/2 complete as to material, Labour <br> and $\mathbf{F O H}$ ) | $\mathbf{1 0 0 0}$ | 49000 |

## III- Calculation of Equivalent Units Produced:

Direct material $=40000+(8000 * 100 \%)+(1000 * 1 / 2)=$ RS48500
Direct labor $=40000+(8000 * 2 / 3)+(1000 * 1 / 2)=\mathbf{R S} 45833.33333$
F.O.H $=40000+(8000 * 2 / 3)+(1000 * 1 / 2)=$ RS RS45833.33333

Calculation Of Per Unit Cost:
= Total Cost/Equivalent Units Produced
Material $=40,500 / 48500$ unit
Material $=0.83505$ per unit
Labor=101700/45833.33333 unit
Labor=2.2189 per unit
Foh=50500/45833.3333 unit
$\mathrm{FOH}=1.101818$ per unit

Question No: 35 ( Marks: 3 )
50,000 units were received from preceding department, 9,000 units were still in process at the end of month (complete all material, $75 \%$ Labour \& FOH). 500 lost units were $60 \%$ complete as to material and conversion costs. This loss is considered as abnormal and is to be charged to factory overhead.
Required: You are required to calculate equivalent units of material, labour and factory overhead.

QUANTITY SCHEDULE:

| Unit received from departmet |  | 49000 |
| :--- | :--- | :--- |
| Unit completed and transfer to next | 40000 |  |
| Unit still in process(all material, 2/3 labour \& FO H) | 8000 |  |
| Abnormal loss (1/2 complete as to material, Labour <br> and FOH) | $\mathbf{1 0 0 0}$ | 49000 |

## Question No: 36 (Marks: 5 )

Irfan Industries Limited has two production departments A and B and two mutually interdependent service departments X and Y . Cost of service departments is apportioned on the basis of following \%ages:

|  | A | B | X | Y |
| :--- | ---: | :---: | :---: | :---: |
| Service department X | $50 \%$ | $30 \%$ | - | $20 \%$ |
| Service department Y | $40 \%$ | $50 \%$ | $10 \%$ | - |

Following figures of departmental costs are available after the primary distribution:

| Department A | 15,750 | Department B | 7,500 |
| :--- | :--- | :--- | :--- |
| Department X | 11,750 | Department Y | 5,000 |

Calculate total factory overhead of production department by preparing a work sheet showing the secondary distribution using Repeated apportionment method.

## Solution

Irfan Industries Limited
Work Sheet showing secondary distribution
Repeated apportionment method

| Particulars | Production department |  | Service department |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{X}$ | $\mathbf{Y}$ |

| Departmental Cost after | RS | RS | RS | RS |
| :--- | ---: | ---: | ---: | ---: |
| Primary distribution | 15,750 | 7,500 | 11,750 | 5,000 |
| Secondary distribution |  |  |  |  |
| Service department X | 5,875 | 3,525 | $(11,750)$ | 2,350 |
| Service department Y | 2,940 | 3,675 | 735 | $(7,350)$ |
| Service department X | 368 | 220 | $(735)$ | 147 |
| Service department Y | 59 | 73 | 15 | $(147)$ |
| Service department X | 7 | 5 | $(15)$ | 3 |
| Service department Y | 1 | 2 | - | $(3)$ |
| Total | $\mathbf{2 5 , 0 0 0}$ | $\mathbf{1 5 , 0 0 0}$ | $\mathbf{0}$ | $\mathbf{0}$ |

## Question No: 37 (Marks: 5 )

Factory overhead absorption rate of a pharmaceutical is Rs 2.50 . Budgeted Factory overhead at two activity levels is as follows for that period.

|  | Activity level | Budgeted factory overhead |
| :--- | :--- | :--- |
| Low | 20,000 Hours | Rs. 45,000 |
| High | 40,000 Hours | Rs. 75,000 |

Actual Factory overhead for that period was Rs. 42,000 and actual volume was 25,000 hours.

## Required:

i. Variable factory overhead absorption rate
ii. Budgeted variable factory overhead at high activity level 40,000 hours.
iii. Budgeted fixed factory overhead

|  | Activity level | Budgeted factory overhead |
| :--- | :--- | :--- |
| Low | 20,000 Hours | Rs. 45,000 |
| High | 40,000 Hours | Rs. 75,000 |
| Change | $\mathbf{2 0 0 0 0}$ hours | Rs 30000 |

1. Variable rate $=$ Change in budgeted $\mathrm{FOH} /$ Change in activity level

Variable rate $=30000 / 20000$
Variable rate=RS 1.5 PER HOUR

## 2. Budgeted fixed factory overhead

Total FOH for 40000 machine hours $=$ Rs. 75000
Budgeted variable $\mathbf{F O H}=40000$ hrs Rs $1.5=$ Rs. 60000
Budgeted fixed FOH = Rs 75000 less Rs. $60000=\underline{\text { Rs. } 15000}$

## Budgeted Activity Level

Budgeted activity level = Fixed FOH/fixed rate
Budgeted activity level $=15000 / 2.25$ less 1.5
Budgeted activity level=20000 hours

Question No: 35 ( Marks: 3 )
Schlamber Company Factory overhead rate is Rs. 2 per hour. Budgeted overhead for 3,000 hours per month is Rs. 8,000 and 7,000 hours is Rs. 12,000. Actual factory overhead for the month was Rs.9, 000 and actual volume was 5,000 hours.

## Required:

1. Applied overhead
2. Over-or under applied overhead.

## SOLUTION:

|  | Activity level | Budgeted factory overhead |
| :--- | :--- | :--- |
| High | 7000 hours | Rs. 12000 |
| Low | 3000 hours | Rs. 8000 |
| Change | 4000 hours | Rs 4000 |

1. Variable rate $=$ Change in budgeted $\mathrm{FOH} /$ Change in activity level

Variable rate $=4000 / 4000$
Variable rate=RS 1 PER HOUR

## 2. Budgeted fixed factory overhead

Total FOH for 70000 machine hours = Rs. 12000
Budgeted variable FOH = 7000 hrs Rs $1=$ Rs. 7000
Budgeted fixed FOH = Rs 12000 less 7000= $\underline{\text { RS } 5000}$

## Budgeted Activity Level

Budgeted activity level = Fixed FOH/fixed rate
Budgeted activity level=5000/2 less 1
Budgeted activity level=5000 hours

## REQUIRMENT NO 1

APPLIED FOH=Actual volume x FOH absorption rate
APPLIED FOH=5000*2
APPLIED FOH=RS 10000

## REQUIRMENT NO 2

## 2.Over-or under applied overhead.

## RS

Actual FOH
Applied FOH
UNDER APPLIED

Question No: 37 (Marks: 5 )
PA limited operates a job costing system. The company standard sale price is predetermined Rs. 505 based on cost plus $20 \%$ profit margin. The estimated cost for Job \# 141 is as follows:

| Direct material | 5 meters $@$ Rs. 20 per meter |
| :--- | :--- |
| Direct labor | 14 hours $@$, Rs. 8.00 per hour |

Production overhead for the year are budgeted to be Rs.200,000 and are to be recovered on the basis of the total 40,000 direct labor hour for the year.

## Required:

ब Calculate Cost of Goods Sold for job \# 141
■ Calculate amount of profit for job \#141
Question No: 35 (Marks: 3 )
Units transferred out to next department 20,000 units. Units lost at beginning of production 500 units. Units in process 2,500 units which were complete as to materials, $1 / 2$ complete as to labor and factory overhead.

Required: Prepare the Quantity Schedule

## SOLUTION

## QUANTITY SCHEDULE:

| Unit received from department |  | 23000 |
| :--- | :--- | :--- |
| Unit completed and transfer to next | 20000 |  |
| Unit still in process(materials, $1 / 2$ complete as to labor and <br> factory overhead) | 2500 |  |
| UNIT LOST | $\underline{500}$ | 23000 |

## Question No: 36 (Marks: 5)

Patacake Ltd produces a certain food item in a manufacturing process. On 1st November there was no opening stock in process. During November, 500 units of material were put in to process, with a cost of Rs, 9,000 . Units completed and transferred-out were 400 units. Direct labor cost in November was R.3840. Production overhead is absorbed at the rate of $200 \%$ of direct labor costs. Closing stock on 30th November consisted of 100
units which were $100 \%$ completed as to materials and $80 \%$ completed as to labor and over head.

Required: The full production cost of completed units during November?

## SOLUTION

## PATA CAKE LTD <br> DEPARTMENT NO...... COST OF PRODUCTION REPORT FOR THE MONTH ENDED ON $30^{\text {TH }}$ NOVEMBER

QUANTITY SCHEDULE:

| Unit received from departmet |  | 500 |
| :--- | :--- | :--- |
| Unit completed and transfer to next | 400 |  |
| Unit still in process(100\% completed as to materials and <br> $80 \%$ completed as to labor and over head.) | 100 | 500 |

## II-Cost Accumulated in the Department / Process:

|  | Total cost RS | TU RS |
| :--- | :---: | :---: |
| Direct Material | 9000 | 18 |
| Direct Labor | 3840 | 8 |
| Factory overhead | 7680 | 16 |
| Total cost to be accounted for | $\mathbf{2 0 5 2 0}$ | $\mathbf{4 2}$ |

## III-Calculation of Equivalent Units Produced:

( $100 \%$ of completed units $+\%$ of units in process)
Material $=400+100 * 100 \%=\mathbf{5 0 0}$
Labor $=400+100 * 80 \%=480$
Foh $=400+100 * 80 \%=480$

## IV- Unit Cost:

=Total cost / Number of Equivalent units produced
MATERIAL=9000/500units= 18 units
LABOR=3840/480 units= 8 units
FOH=7680/480 units = 16 units

## V- Apportionment of the Accumulated Cost:

No of completed units $x$ Total cost per unit

$$
400 \times 12 \quad=\quad 16800
$$

Material 100*18
1800

| Labor | $80 * 8$ | $\mathbf{6 4 0}$ |  |
| :--- | :---: | :--- | :--- |
| Foh | $80 * 16$ | $\underline{1280}$ | $\mathbf{4 2 0 0}$ |
| TOTAL COST ACCOUNTED FOR |  | $\mathbf{2 0 5 2 0}$ |  |

## Question No: 37 (Marks: 5)

Ali Company estimates its factory overhead for the next period at Rs. 64,000. It is estimated that 30,000 units will be produced at material cost of Rs. 65,000. Production will require 25,000 direct labor hours at an estimated cost of Rs. 130,000. The machine will run about 18,000 hours.
Required: the predetermined factory overhead rate based on:
i. Units of production
ii. Direct labor hours
iii. Machine hours
iv. Direct labour cost
v. Material cost

## Question No: 35 ( Marks: 3 )

What is the justification of spreading the cost of lost units over the remaining goods units?

## Solution:

Whenever a loss of units is normal in producing the final units, the good units completed absorb all costs, resulting in a spreading of the cost of lost units over the remaining good units. When abnormal or unusual losses occur, the cost ordinarily assigned to any such lost units might be charged to factory overhead or to a current period expense account. This method results in the assignment of normal (nonloss) costs to remaining good units.

When units are lost in departments subsequent to the first, an adjustment must be made to the unit cost representing work done in preceding departments. The fewer units must absorb the preceding department's costs, resulting in an increase in that department's unit cost.

Ordinarily, there is no difference in completed unit costs whether units are lost at the beginning or during operations. The cost of lost units is spread over remaining good units including those still in process. However, when units are lost at the end of operations, after completion, or are otherwise identified as not pertaining to work in process units, the cost of these lost units is customarily assigned to finished units only. No lost unit cost is assigned to units still in process.
